I fixed the conflict and I want to cancel the rebase to get back to where I was before. I know how to reset the branch in my local clone. That's exactly what I need. But the remote branch I am on has a very low revision count (I want to get it back to the state it was before the rebase started). Is there a way to reset the branch and undo the rebase? A: Check out the git rebase documentation. It should be fairly straightforward. This script will let you abort a re-base in progress, if you have already started it.

```
#!/bin/bash # variables remote=$1 head=$2 # abort script if remote is already rebased git log --oneline --all $remote | grep '^[' | awk '{print $1}' > /dev/null if [[ -n "$?" ]]; then exit 0; fi # abort script if branch is already rebased git log --oneline --all $head | grep '[' | awk '{print $1}' > /dev/null 82157476af
